

PRIMARY LOCKUP ON WHITE

Solid Ink Black. The default on white and Warm Grey 100. Use this everywhere the accent version is not called for.

CORAL ACCENT

Leading bar in Signal Coral. Use as the footer mark on document and slide interiors, one instance per surface.

COBALT MARK

Deep Cobalt mark, ink wordmark. Use where a page already carries coral, so the two never compete.

ICON, LIGHT BACKGROUNDS

Ink at 62, 40, 24, and 18 px. Minimum is 16 px, below which the bar gaps close. Coral accent and full coral cuts sit at right.

CLEAR SPACE

Clear space on all four sides equals one bar height of the asset being placed, shown here at true scale on the 56 px icon. Nothing enters that zone: no rules, no type, no image edges, no other logos.

MINIMUM SIZE

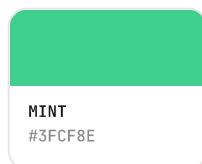

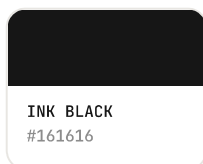

Icon 16 px screen / 5 mm print

Lockup 180 px screen / 48 mm print

Use the icon, not the lockup, in any space narrower than 180 px. The lockup is a long horizontal line, so give it room rather than shrinking it.

PALETTE

PRIMARY LOCKUP ON INK

Pure White, whole mark. The default on Ink Black, Deep Cobalt, and any photograph dark enough to hold it.

CORAL ACCENT

Leading bar in coral, wordmark white. The dark counterpart to the light accent version.

ON COBALT

White only on Deep Cobalt. Coral against cobalt sets two saturated colours fighting, so it is not permitted here.

ICON, DARK BACKGROUNDS

White at 62, 40, 24, and 18 px. Never screen the mark back to a tint of white; use the whole mark at full strength or drop it.

APP ICON TILES

Ink tile

Coral tile

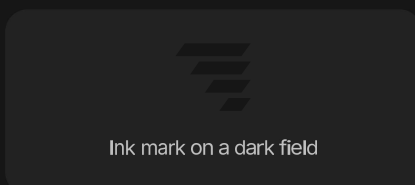

White tile

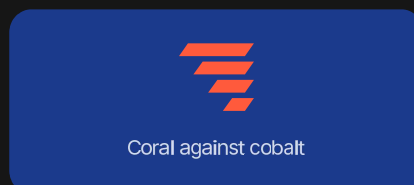

Avatar

Corner radius is 22 percent of the tile, matching the rounded shape language. Ink tile is the default; coral is for consumer-facing placements.

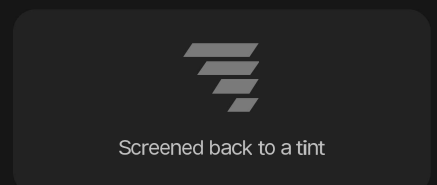

DO NOT, ON DARK FIELDS

Ink mark on a dark field

Coral against cobalt

Screened back to a tint
